

LEAFLET LIP CONTOUR AND LIP AUGMENTATION

Lip treatment

Contour and fullness of lips (especially of the upper lip) often disappear with age. By injecting filler (hyaluronic acid) between the red of the lips and the normal skin, the lips become more expressive.

Previously, we will discuss the extent of lip corrections with our patient in detail. Decent natural looks will be possible.

Procedure

Since patients receive local anesthesia like at the dentist, the treatment will not be painful at all. The result will be visible immediately after the treatment.

After the treatment, outsiders will not notice anything. In rare cases, the lips might swell a little. Swelling will disappear in 1 to 2 days.

What needs to be taken into account?

The substance remains about 4 to 6 months in the tissue (due to increased blood circulation) and will then be metabolized by the body.

Frequently asked questions (FAQ)

- How long will I feel the local anesthesia?
About 30 to 60 minutes.
- Do outsiders notice the treatment?
No, the result is nice and natural.
- Is the treatment painful?
With the exception of the local anesthesia (2 punctures on the left and the right of the nose), you will not feel anything.
